

Drug Testing

Urine drug testing (UDT) or Oral swab testing provides objective information to assist clinicians in identifying the presence or absence of drugs or drug classes in the body and making treatment decisions.

It is the policy of Fortis Behavioral Health for any patient over the age of 18 receiving prescriptions for controlled substances (ex. Sleep hypnotics, ADHD stimulants and Lyrica) that patients are subject to drug testing at the request of the provider at various times throughout treatment.

Patients who test positive for illegal substances will be discharged from the practice. Any positive in office screen will be lab verified prior to a decision related to continued care.
